

Soyoon Choi

Technical Writer | Information Architecture · API Documentation · Documentation Automation

SUMMARY

Technical Writer with experience in DBMS and autonomous-driving software, producing product references, user and installation guides, API documentation, and release notes in both Korean and English. Strong in information architecture, audience definition, and building systems that make documentation easier to generate, validate, review, and maintain. Writes directly in both Korean and English.

SKILLS

HARD SKILLS

Documentation Design	Information architecture · audience analysis · content types · conditional content · terminology/style guides
Technical Writing	User/install/operations guides · API/SQL reference · release notes · troubleshooting
Tools & Automation	Markdown · Docusaurus · MkDocs · OpenAPI · Git/GitHub · GitHub Actions · documentation build/QA automation
Technical	JavaScript · Python · SQL · C · C++ · IEC/IEEE 82079-1 · DITA information types

SOFT SKILLS

Structured Thinking · Cross-functional Collaboration · Clear Communication · Problem Solving · Ownership

PROFESSIONAL EXPERIENCE

Autonomous Driving Software Company | Technical Writer | Jan 2025 - Present

Owens English user documentation and the supporting documentation system for a five-product autonomous-driving solution.

- **Documentation architecture:** Designed a two-level structure of solution and product manuals and maintained 171 documents, 310 images, and approximately 187K words; authored 128 documents (about 75%) from scratch.
- **Audience and content standards:** Defined three audience tiers and prerequisite knowledge levels. Created a Technical Writing Guide in Confluence to align decisions on main-body, appendix, reference, and out-of-scope content.
- **Publishing system:** Built a static-site generator that produces web and PDF outputs from one source and assembles customer-specific content by customer, internal/external visibility, and feature conditions.
- **QA and API automation:** Added build-time validation for links, anchors, and conditional-content structure; built an OpenAPI-based reference pipeline with diff reports for specification changes.
- **Review workflow:** Moved reviews from Google Docs to Markdown and GitHub Pull Requests and created contributor guides; most previously delayed reviews now finish within 1-2 days.
- **Usability for contributors:** Built a web GUI so non-CLI users can run the same documentation build and validation workflow.

DBMS Software Company | Technical Writer | Nov 2023 - Dec 2024

Wrote and maintained Korean and English DBMS documentation in a public, GitHub-based documentation repository.

- **Technical documentation:** Wrote and updated 31 document sets including SQL reference, API/JDBC/CLI manuals, replication and log-analyzer guides, installation guides, and release/patch notes.
- **Bilingual maintenance:** Created English editions for manuals that had no translation and later updated Korean source and English translation in the same Pull Request.
- **Multi-version maintenance:** Propagated changes across Korean and English documentation for 7.1, 7.3, and trunk version trees.

- **Source quality:** When translation exposed ambiguous source text, revised the Korean original rather than only polishing the English; maintained terminology consistently across the documentation set.
- **Collaboration and publishing:** Submitted 113 Pull Requests and merged 101 as a repository Collaborator; also built a web manual site with MkDocs and Read the Docs.

SELECTED PROJECTE

VELA Virtual Product Documentation Set | Personal Project | 2026

Designed a public documentation sample and an automated quality-checking workflow from end to end.

- **Documentation set:** Created 44 Korean documents with English translations and 17 diagrams for four audiences: vehicle owners, release operators, developers, and field engineers.
- **Quality model:** Separated 79 glossary entries, style rules, audience definitions, and warning levels into configuration files.
- **Automated validation:** Built checks for terminology, audience level, document structure, links/anchors, and translation consistency, and connected them to GitHub Actions so errors stop build and deployment.

EDUCATION

Degree / Program	Institution	Dates
B.S. in Computer Science	Oregon State University, USA	Jan 2021 - Mar 2023
General AS, Computer Science / Engineering Path (transferred)	Pellissippi State Community College, USA	Aug 2018 - Aug 2020
B.A. in Creative Writing	Soongsil University, Seoul, South Korea	Mar 2012 - Aug 2018

CERTIFICATIONS & LANGUAGES

Engineer Information Processing (2023) · ADsP, Advanced Data Analytics Semi-Professional (2023) · OPIc AL (2022, expired)

Korean: Native | English: Professional technical writing and Korean-English translation
